Easy read privacy notice for participants

Investigating Children's Agency when Learning with AI (CHAILD)

We would like to invite you

and your parents or carers to take part in a research study for young people aged 13–17.

In this research we will

study how children and young people use generative AI tools for learning. This includes chatbots – computer programs that reply to your messages.

You will need to

use our AI application for learning at home, complete questionnaires and talk to us each week for about five weeks. We record interview sound, but no video.

Why are we doing the research?

We want to understand how AI tools affect the way young people make choices, direct their own actions and learn.

Who are we?

Prof. Manolis Mavrikis

learnwithai@ucl.ac.uk

Dr. Jun Zhao

oxfordccai@cs.ox.ac.uk

The researchers running this study are part of the UCL Knowledge Lab and the Oxford Child-Centred AI Design Lab.

The UCL Knowledge Lab is part of the Institute of Education at University College London (UCL).

The Oxford Child-Centred AI Design Lab is part of the Department of Computer Science at the University of Oxford.

UCL and University of Oxford have to look after the information you give us, and this means they are called the 'controller' of the information collected about you.

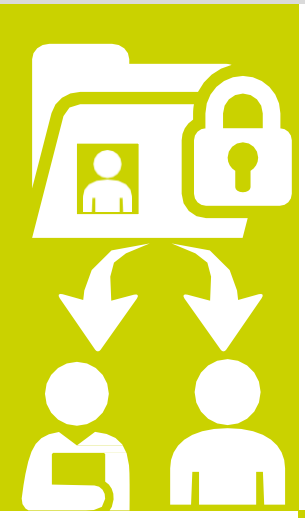

Information about you that we collect

Your name and contact details, your age, school year, gender and experience of using AI tools; questionnaire answers, interview recordings and notes; app messages, uploaded files, feedback, clicks, and times of use. We collect device and connection details to keep the app working properly.

We may also interview your parents or teachers.

Who will see your data?

We follow the rules of Data Protection Law.
We will keep your information safe and protected. We sometimes call this information 'data'.
We will use a fake name instead of your real name where possible and keep contact details separately.
At the end of the research, we will share our research results with you.
Afterwards, we will take out remaining personal details from your data.

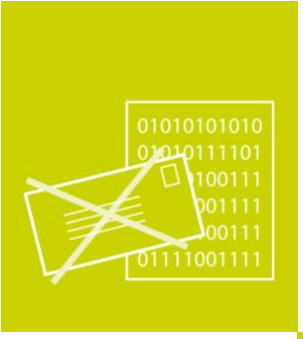

Researchers at UCL and Oxford will be able to read the data collected during the study.
Our AI app automatically checks content for safety. Researchers also review records of app use. If we think someone is unsafe, we may tell a parent, teacher, or safeguarding worker who can help.

Where possible, your data will be stored and processed in the UK. Your chats are not used to train AI models. Interview recordings and research files will be stored in Microsoft servers in the UK.

Some of your data will be sent abroad: the app will run on Amazon servers in the UK and Europe. Qualtrics stores survey answers in the USA. These services have data protection agreements with UCL.
The app also checks uploaded images for signs of child abuse. It may keep and review any flagged images and report them to child-protection authorities.

This helps with other research about

how young people use AI for learning. We may share a carefully checked copy of research data with other researchers in this country and other countries. We will take out your name and details that could identify you.

The project data will be stored safely for future research. We keep research records and permission forms for at least 10 years after the project ends. An anonymous shared copy may be kept longer.

How we use your information and what happens after the research

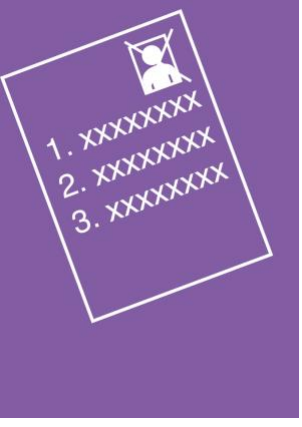

We will give you a summary of the results of the research. Other participants will also get this summary.

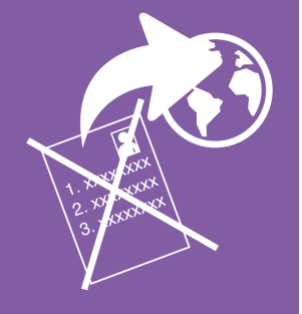

A summary of all the data collected from everyone who takes part will be shared at presentations and in reports which can sometimes read by anyone on the internet.

The results will not use your name or school. They may include short quotations. We check these to reduce the chance of anyone recognising you.

Deleting things in the app

You can delete chats and files in the app. Copies or extracts may stay in research logs. We remove these from the research dataset before archiving it. To ask us to remove your study data, contact us.

Your information rights

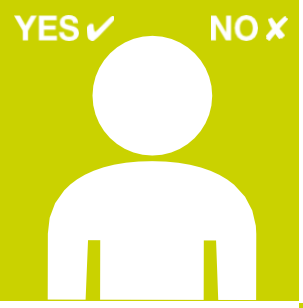

You can ask to see or correct your data. You can also ask us to delete it or stop using it. We will not use any information that identifies you or transfer it to other countries outside of what is specified in the study information documents.

LAW

We can only use your data if we have a legal reason to do so. For this study, the research is done because it is interesting and important to the general public. The law allows universities to do this kind of research. The proper name for it is a 'task in the public interest'.

What is next?

Do you want to take part? You can decide.
If you choose to participate, you can also stop at any time.

You or your parent can ask us to remove your study data until two weeks after your last session. Later, we may not be able to find it.

If you have any questions about taking part in the study, you can contact the researchers on

learnwithai@ucl.ac.uk

If you have any questions about this Privacy Notice or want a say in how information about you is being used or want to complain, then contact our Data Protection Officer using the details set out below:

Data Protection & Freedom of Information Officer

data-protection@ucl.ac.uk.

You can contact us by telephoning +44 (0)20 7679 2000 or by writing to: University College London, Gower Street, London WC1E 6BT.

If you want to complain about the way your information has been used, you have the right to lodge a complaint with the Information Commissioner's Office (ICO).

For further information on your rights and how to complain to the ICO, please refer to the ICO website: **www.ico.org.uk/**

For full details relating to how we use your personal data for the purposes of research, please see our research privacy notice:
